

# **OUR STORY**

Snap Dock's story began in 1982 when our parent company first patented a rotationally molded collapsible container, quickly becoming the standard for the automotive and manufacturing industries. The company later expanded into other rotationally molded products that serve the industrial market. Along the way, we saw an unmet need for an industrial floating walkway system that could be rapidly deployed. In 2018, Snap Dock rolled out a polyethylene floating walkway into the industrial market. After finding success with that product, we began developing a recreational lineup according to the same core tenets of durability and ease-of-use, launching in 2021.

# DESIGNED WITH YOU IN MIND

### **Versatility**

Snap Dock's floating dock system seamlessly transitions between residential, commercial, and industrial applications, including marinas, restaurants, campgrounds, resorts, and boat rental facilities. Regardless of the project, Snap Dock has you covered.

#### Built to Last

Snap Dock floats are rotationally molded from linear low-density polyethylene (LLDPE) backed by an 8-year limited warranty. Given that Snap Dock's first customers were industrial operators, you can rest assured that Snap Dock's products are built to withstand the harshest conditions.

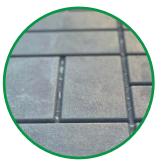

#### Low Maintenance

Snap Dock products require less maintenance than a traditional wood dock system. Due to the unique paver pattern surface that will channel water, and light gray color that hides dirt, the system will maintain its high-end appearance longer.

### Easy to Configure

Unlike traditional systems and even other plastic floating dock products, Snap Dock's connection system makes installation quick and straightforward. It can even be done on the water using our installation tool.

# THE SNAP DOCK ADVANTAGE

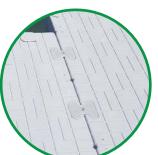

#### **Attractive Non-Slip Surface**

All dock sections feature an attractive non-slip surface to ensure safe and enjoyable use for years.

#### **Unmatched Strength**

SnapDock's coupler system allows our docks to with stand significant wave action in rough water.

#### **Seamless Color Integration**

Snap Dock's coupler system matches the color of dock components.

### **Reinforced Surface Support**

Snap Dock components are engineered to reduce deflection on the walking surface.

#### **Industrial Grade Durability**

All Snap Dock modular components are produced with industrial grade plastic (LLDPE) ensuring consistent performance in the most extreme weather conditions.

#### **Customer Experience**

We are committed to creating a family-like customer experience for distributors, dealers and end-users.

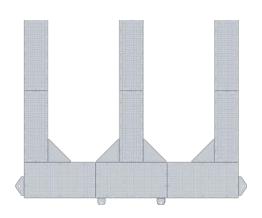

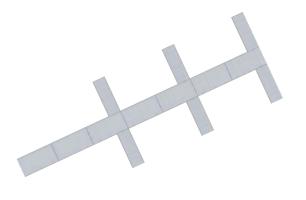

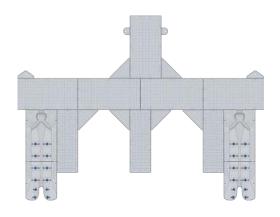

# **ENDLESS POSSILITIES**

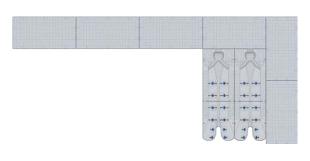

Regardless the type of project, the Modular Snap Dock System was designed to be configured in countless ways allowing for endless possibilities!

## **DOCK SECTIONS**

Snap Dock's sections are made from rotationally molded industrial grade plastic (LLDPE) with UV inhibitors to ensure consistent performance in the most extreme weather conditions as well as stand the test of time. In addition, each dock section features an attractive non-slip surface for years of enjoyable use as well as reinforced surface support to deliver uniform support across the every inch of each dock section.

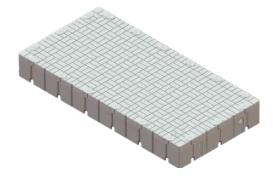

#### 40" Dock Section

Color

1750 lbs./ 794 kgs. 370 lbs/ 168 kgs. 168" x 59" x 15" SNAP-PORT-ASSY-GR Light Gray The Snap Port is the perfect solution for residential and commercial customers who want easy access to their jet skis and also want to protect them. Snap Dock's Drive on PWC port accomplishes this with several advanced features including a split entry with dual adjustable rollers for easy docking and launching, built-in bow stop and two-piece design that allows for a smoother entry and exit.

Customers can install our ports with other existing floating or fixed dock systems, connected to our dock system, or as a stand-

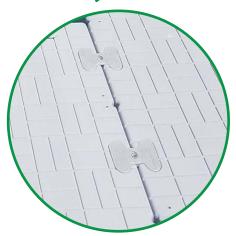

alone system.

## **COUPLER SYSTEM**

Snap Dock's patent pending coupler system uses durable rubber composites, making each coupler strong, flexible and lightweight. This unique combination ensures our docks will perform well in the most extreme weather conditions. In addition, the coupler system enhances the overall aesthetics of any dock by blending in with the dock sections and components.
